

PROFILE

Keihin Electric Express Railway Co., Ltd. (commonly known as Keikyu), is one of the 15 major private railways in Japan. Serving as a link between central Tokyo and the southern metropolitan area, the Company plays an important role in Tokyo's public transportation system. Since its founding in 1898, Keikyu and its Group companies have worked to develop the Group's core rail and bus transportation businesses and establish operations in real estate, hotels, leisure, distribution, and other sectors. Today, the Keikyu Group is targeting further expansion in its businesses.

In its railway operations, Keikyu carries approximately 1.19 million passengers daily on its 87.0-kilometer railway network linking Shinagawa, which is expected to see even further development in the near future as one of Tokyo's sub-central towns, with Haneda Airport, Kawasaki, Yokohama, Yokosuka, Zushi, and Miura in Kanagawa Prefecture. In October 2003, a new station for the Tokaido Shinkansen bullet train was opened at Shinagawa Station-the Company's main terminus station.

In November 1998, Keikyu achieved its long-standing goal of providing railway services to Tokyo International Airport (Haneda Airport). With the opening of Haneda Airport Station, Keikyu has been instrumental in greatly improving access to the airport. In December 2004, accompanying the opening of the second terminal at Haneda Airport, Keikyu established a new ticket gate. Furthermore, in response to the re-extension and internationalization of Haneda Airport, the Company has begun construction of a new station linked directly to the new international terminal building.
